

## Plan B - Case Study

\*\*\*\*\*

Co: Breez

Biz Area: Business Development, Vertical Mapping and Lead List Generation

### Case Study Description:

Across the P2P Tech landscape map out verticals (use case categories) and list leads within those verticals where we can make a compelling case for self custodial Bitcoin payments powered by the Breez SDK.

Objective 1: Map out verticals in the global P2P tech landscape where there is a use case for self custodial Bitcoin payments powered by the Breez SDK (provide and sort by TAM).

Objective 2: Create Lead lists for the verticals mapped (e.g. top 50 leads per vertical sorted by number of users per lead, point of contacts, email addresses per lead).

Required Info: <https://breez.technology/>

Breez is a self-custodial Lightning-as-a-Service company bringing permissionless, peer-to-peer Bitcoin payments to apps and services globally with the free and open-source Breez SDK.

The Breez SDK provides developers with an end-to-end solution for integrating self-custodial Lightning payments into their apps and services. It eliminates the need for third parties, simplifies the complexities of Bitcoin and Lightning, and enables seamless onboarding for billions of users to the future of peer-to-peer payments.

Additional Notes:

Would love to have an intro call to explain the case study and help guide.

Examples of P2P Tech: direct marketplaces (platforms when buyers and sellers directly engage), creator economy platforms, gig economy platforms, social networks, crowdfunding platforms, remittance platforms, messaging platforms, email platforms, donation platforms, resource sharing platforms etc
