

Company: Echox

Business Area: Real World Asset (RWA) infrastructure, on-chain settlement, and cross-chain commerce protocols

Case Study Description:

The RWA space is growing rapidly, but bridging trust between on-chain transactions and off-chain real-world asset delivery—especially in high-value sectors like real estate and automobiles—remains a major challenge. While digital payments and asset issuance can be completed on-chain, the actual transfer and enforcement of the underlying physical asset often lack automation, transparency, and trust guarantees.

This case explores how Bitcoin technology, particularly Layer 2 solutions like the Liquid Network, can make **trust programmable**—enabling seamless, enforceable, and compliant RWA transactions that link physical asset guarantees to blockchain-based financial instruments.

Objectives:

1. **Market & Use Case Mapping:**

Categorize high-value real-world assets (e.g., real estate, vehicles, equipment, precious metals) and analyze their total addressable market (TAM). Identify which asset types and transaction flows rely most on trust (e.g., delivery, verification, settlement) and would benefit from on-chain automation.

2. **Architecture Proposal:**

Design a system that uses Bitcoin ecosystem tools (e.g., Liquid Network with Blockstream AMP) to make asset issuance and settlement programmable. Identify the required real-world components (e.g., brokerages, banks, custodians, clearing institutions) needed to support smooth, compliant RWA product issuance by individuals or enterprises.

Required Information:

- Liquid Network: <https://liquid.net/>
- Blockstream AMP Docs: <https://docs.liquid.net/docs/blockstream-amp-overview>

Useful Resources:

- <https://securitize.io/> — Leading provider of tokenized securities
- <https://ondo.finance/> — RWA tokenized bonds and treasury solutions
- <https://plume.org/> — RWA Finance protocol

Additional Notes:

Would love to have an intro call to explain the case study and help guide.

Example Use Cases or Scenarios:

- On-chain real estate sales and automated closing workflows
- NFT-based vehicle pre-orders and digital ownership certificates
- Equipment leasing with smart contract enforcement
- Cross-border asset brokering and trustless settlement
- Tokenized bonds and vouchers with redeemable real-world backing
